About:

Software Engineer at Ethara.AI specializing in LLM post-training and AI evaluation infrastructure. Experienced in building agentic benchmarks, long-horizon and multi-turn evaluation environments, multimodal tasks, trajectory-generation pipelines, and deterministic grading systems for large language models. Hands-on experience with Python, PyTest, AWS EC2, Amazon Bedrock, Docker, Git/GitHub, and CLI-based development, with exposure to SFT, RL/RLHF, evaluation data curation, benchmark generation, and model-judge workflows.

TECHNICAL SKILLS:

Programming Languages: Python, Java, C, JavaScript, SQL, Bash/Shell, JSON, YAML

AI / LLM: LLM Post-Training & Evaluation, Agentic AI, SFT, Reinforcement Learning (RL), RLHF, Long-Horizon Reasoning, Multi-Turn Evaluation, Multimodal Evaluation, Tool Use, Trajectory Generation, Data Curation, Benchmark Development

Machine Learning & AI: TensorFlow, OpenCV, CNNs, LLMs, RAG Pipelines (exposure), Data Pre-processing, Feature Engineering, Computer Vision, Recommender Systems

Data & Distributed Systems: Git, GitHub, GitHub CLI, Node.js, npm, PostgreSQL, MySQL, MongoDB, NumPy, Pandas, TensorFlow, PyTorch, OpenCV

Cloud & DevOps: CI/CD (basic), AWS, Amazon EC2, Amazon Bedrock, Docker, CLI-based Development, Virtual Environments

WORK EXPERIENCE:

Software Engineer | Ethara AI **(Jul 2026 – Present)**

- Build and maintain **LLM agent evaluation infrastructure** for multi-turn and long-horizon tasks, covering tool use, reasoning, planning, memory, state transitions, and autonomous execution.
- Develop **trajectory-generation, deterministic grading, and automated QC pipelines** using Python, PyTest, AWS EC2, and Amazon Bedrock to evaluate and validate agent behavior.
- Debug and improve **model-judge and regrading workflows**, including authentication, model routing, evaluation failures, and benchmark integrity across large-scale evaluation runs.

LLM Post-Training Intern | Ethara AI **(Feb 2026 – Jun 2026)**

- Built and validated **multi-turn, long-horizon, and multimodal agent evaluation tasks**, covering reasoning, planning, tool usage, memory, and autonomous task completion.
- Developed **evaluation rubrics, test cases, and QC pipelines**, while contributing to post-training data workflows and debugging task-generation, state-mutation, and grading issues using **Python, PyTest, AWS EC2, and Amazon Bedrock**.

Software Development Engineering Intern | SK Info Techies **(May 2025 - July 2025)**

- Developed and enhanced web applications using **JS, React.js, and Node.js**, while working with MySQL/MongoDB, REST APIs, and Git/GitHub; reduced issue resolution time by **~20%** through effective debugging and troubleshooting.
- Collaborated in an **Agile SDLC** environment, contributing to code reviews, sprint tasks, testing, and application debugging while supporting reliable and consistent software delivery.

PROJECTS:

Analytical Posture Modelling for Personalized Curriculum Optimization

Python, CNN, OpenCV, MediaPipe, MySQL, Power BI

- Developed a real-time posture classification and attention-analysis system using CNNs, OpenCV, and pose/face landmark detection to analyze student posture and engagement.
- Built data-processing and analytics pipelines to correlate posture/attention patterns with academic performance, generating structured reports and personalized curriculum insights.

Multimodal Deepfake Detection: Voice + Video

LLMs, CNNs, Audio-Video Processing, Python, ETL/ELT

- Developed a multimodal deepfake detection system combining LLMs, CNNs, and audio-video signal processing to analyze and classify synthetic media across multiple modalities.
- Designed ETL/ELT pipelines for large-scale multimodal datasets, covering data preprocessing, exploratory analysis, feature extraction, and model-performance evaluation to support scalable ML experimentation.

EDUCATION:

Bachelor of Technology, Computer Science, Specialization AIML (GPA – 7.5/10.0) (Sep 2022 - May 2026)
Sharda University, Greater Noida, Uttar Pradesh

Patent (Published): **(August 2025)**

Analytical Posture Modelling for Personalized Curriculum Optimization

Patent Publication Number: 202511063027

Designed an AI-driven model using CNNs, heatmap keypoints, and PAF-based posture detection to generate automated student performance reports and personalized curriculum recommendations. Built end-to-end data pipelines and analytics modules for subject-wise evaluation.
